EUROVAC DOWNDRAFT TABLE
Make your Plant a Healthier, Safer Place to Work in by Eliminating Sanding Dust at the Source.

POWERFUL 5 H.P. MOTOR AND FAN
Generates 4000 C.F.M.; drawing dust through the table top and side slots; around the outside of the plenum and through the sides of the filters (see diagram below). The filters cause the dust to fall into the drawers below. The clean air inside the filters is drawn through the plenum and exhausted through the adjustable flow direction damper.

COMPACT CONSTRUCTION
Self contained motor and fan provide more work space. There is sufficient air movement for two technicians to work side by side or at each end of the table. The table can be easily moved to another work area.

POLYESTER CARTRIDGE FILTERS
Won't clog up like bag filters. With minimal cleaning, the table will draw year after year, as well, as when you first install it.

EASY TO CLEAN
Filters are easily cleaned by compressed air pulse jet cleaning. Magnahelic gauge indicates when cleaning is needed.

ENERGY EFFICIENT
A convenient switch allows you to operate the table only when you need it. Air is cleaned and returned to the plant so you don't have to reheat or air condition outside air as you do with central dust collection systems. Includes clean air side/back discharger with adjustable flow direction damper.

SPECIFICATIONS
Blower - BL (non overload type)
• 4000 C.F.M.
• Blower enclosure lined with sound absorbing acoustic insulation
• Direct drive

Filtration
• 6 polyester filters
• 350 sq. ft. filtration area

Electrical
• 5HP motor
• 208-230/460/575V/3PH/60HZ

Construction
• Heavy Duty 16 GA reinforced steel
• Overall enclosure 44" x 37" x 96"
• Fully removable top grill assembly
• Fully removable cartridge filter assembly
• 2 sliding drawers (for dust removal)

MADE TO ORDER OPTIONS
• Other table tops including rollers
• Other dimensions
• Back-draft models
