

DROPS AND PIPE FITTINGS

Eurovac systems are designed for convenient use. Vacuum drops (work stations) are placed exactly where you need them for increased productivity.

Airlines can be run down to work stations, and vacuum hoses are fitted with air lines attached to them. This keeps airlines off the floor of the working area, and makes it easier for shop technicians to operate the system.

Work stations can be equipped with micro switches so that the system is automatically turned on and off when the technician plugs in the hose.

We use graduated 14 to 16 gauge steel tubing, long radius bends and joins with expanded ends which fit over the tubing and are secured with heat shrink sleeves. The system is graduated to maintain air flow at approximately 4500 cubic feet per minute. Metal tubing is superior to PVC or ABS piping because it has long radius bends and does not generate static electricity.

Single Wall-Mounted
or Hanging Drops

Double Wall-Mounted
or Hanging Drops

Multiple user system designed for continuous use.

Articulated booms & pendant drops with dual inlet,
integrated compressed air and 110v electric.
