

EUROVAC II - 2.5HP CENTRAL DETAIL VACUUM SYSTEM

Properly detail vehicles with a Eurovac vacuum system

PRODUCT DESCRIPTION

- **Powerful 2.5HP Pump** produces, 125" of water column and 115" of free flow CFM.
- **Superior Filtration** ... Cyclonic filtration removes 99% of dust before the secondary filter. This results in the unit operating much more efficiently than units which do not have cyclonic filtration.
- **Quiet** ... Muffler and insulated motor housing reduce noise level below 65 dBA's
- **Inlet** ... The system is provided with an inlet already pre-mounted onto the unit. Alternatively the system can have piping and multiple drops located throughout a detail shop.
- **On/Off feature** ... Micro switch turns system on and off when hoses is plugged into the inlet (when used as a central system).
- **Easy to Install** ... complete installation instruction.

System Benefits

- Increase productivity and efficiency:
Place vacuum drops exactly where you need them and eliminate the use of portables..which can often hinder production
- Eliminate breakdowns: High efficiency industrial grade motors and superior filtration systems keep your Eurovac equipment up and running, and always ready for use
- Eliminate unsafe cords on the floor of your work areas: With a Eurovac system installed in your shop, there are no cords to trip on, or to create potentially dangerous situations
