

VACUUM ASSIST TOOL OUTLINE FOR BODY SHOPS

A. ORBITAL SANDERS

Most popular North American 5", 6", and 8" DA's and fileboards are available with the "vacuum assist" or vacuum ready feature built-in.

As you can see from the following picture, the sanding pads have holes in them through which the sanding dust is extracted. the major sand paper companies have pre-punched sand paper in all the popular grits and sizes for all the popular tools.

Conversion kits are available for most popular sanders including Hutchins, National Detroit, Chicago Pneumatic, Dynabrade, ARO, Ingersoll Rand, and Viking. Their resale prices range from \$50 to \$100 each. Most body shops find that the conversion kits work as well as new vacuum assist tools because in most cases the conversion kits are the same parts used by the manufacturer for the new tools.

If you would like us to quote you prices and availability on converting your tools, please fax us (905-850-1278) the brand name (e.g.. National Detroit, DAQ, etc.), the type of tool (6" or 8" orbital sander or straightline file board etc.) and we will fax you back the availability and pricing of the tools.

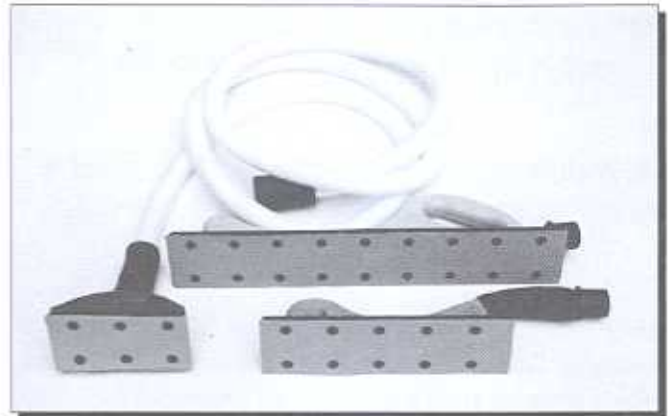

If you decide to buy the conversion kits through Eurovac, we drop ship them directly to you from the various suppliers we obtain them from. The bodymen are able to install the conversion kits themselves in a matter of minutes. Unfortunately the various tool manufacturers have different sized vacuum exhaust on their vacuum assist tools and conversion kits. We will ensure that you get the proper tool adapters for adapting these tools and conversion kits to our vacuum hoses. Our vacuum hoses and tool adapters have quick disconnect cuffs so technicians with one vacuum hose and three or four tools can easily switch tools.

B. VACUUM ASSIST HAND SANDERS

- 1400D 2 3/4" x 15 3/4" hand sander
- 1411D 2 3/4" x 9 1/2" hand sander
- 1405D 2 3/4" x 6 3/4" hand sander
- 1013 3/4" x 8' ultra light hose

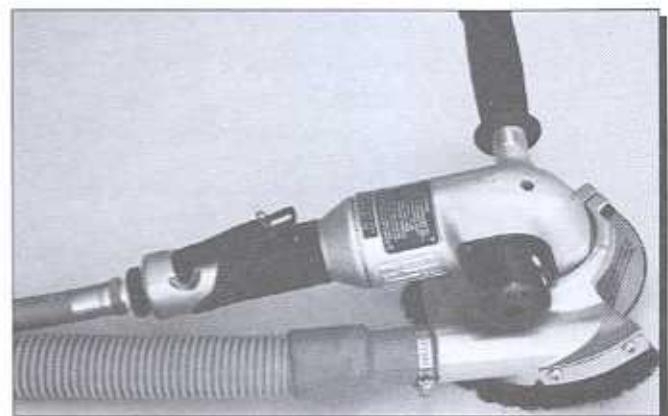

Vacuum Assist Hand Sanders are very effective at picking up sanding dust.

We recommend one 3/4" x 8' ultra light vacuum hose per technician because it gives the hand sander a much better "feel" for the tool than with the standard 1-1/4" vacuum hose. The 8' ultra light hose is designed to be plugged into our standard 1-1/4" vacuum hose.

C. GRINDERS

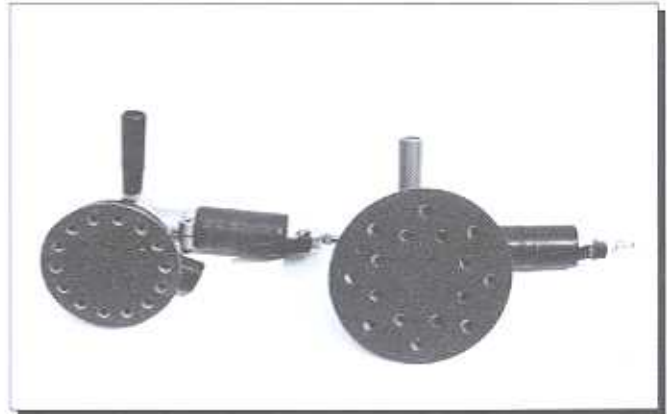

North American tool companies have recently begun to make grinders with dust extraction take-offs. Sioux Tools has a line as does Dynabrade. The following is a picture of the Dynabrade 5" grinder with shroud.

We have found that the shrouds on the market have two drawbacks. Sometimes the shroud blocks the view of the tip of the disc, particularly when using the side of the disc. The shrouds are also not totally effective in picking up sanding dust being "hurled" at 2000 to 12000 RPM off the disc. As outlined in the adjacent picture, Eurovac has a full range of retrofit shrouds. Shrouds are available for 3", 5", and 7" discs and grinding stones.

Eurovac has developed a system that is extremely effective at picking up grinding dust. We use grinders with holes in the pad and discs. A Velcro system holds the disc in place and allows for easy removal. Cloth and fibre backed discs in 4", 6" and 8" sizes are available in most popular aluminium oxide and silica carbide grits. We can supply new tools or convert your existing tools to this system. Conversion of your existing tools would cost \$100 per tool.

D. WELDING

30-580 WELDING ATTACHMENT

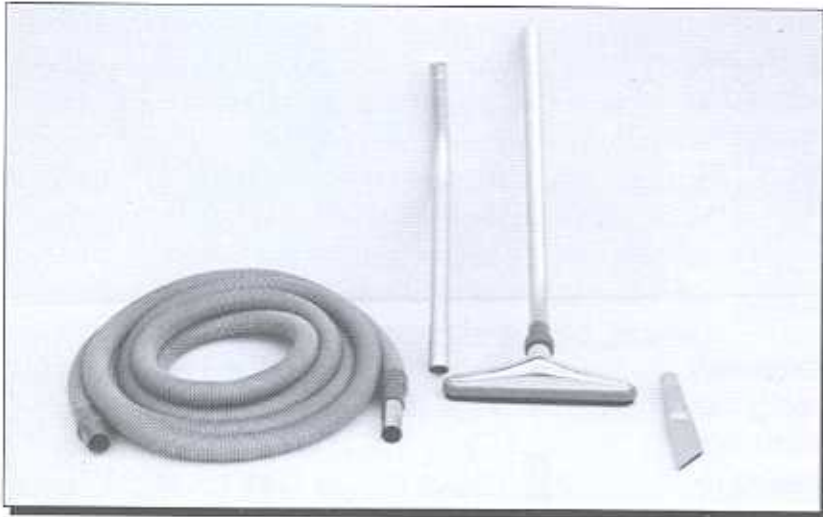

The Eurovac Welding Attachment is very effective at removing welding fumes. The flexible metal "goose neck" attached to the scoop allows you to bring the vacuum very close to the welding. The base has a powerful magnet for attaching to metal. The welding attachment is plugged into the vacuum system by a Eurovac utility hose.

E. CLEANING ACCESSORY KITS

50-545 MOBILE WET PICK-UP

The Eurovac Mobile Wet Pick-up is designed to pick-up water or other debris (like glass) that you don't want to go through the vacuum system. The Mobile Wet Pick-up comes with two 15' x 1½" hoses – one for attaching to a vacuum tool and the other for plugging into a vacuum inlet. The water or debris falls into the Mobile Wet Pick-up can when the air flow passes over the space between the inlet and outlet on the lid of the can. A floating ball stops water from going through the system when the can is full.

50-500 SHOP CLEANING PACKAGE

Contents:

- 1-1/2" X 30' vacuum hose with 1'-1/2" swivel cuff on one end and 1-1/2" X 5" steel reducer for connecting hose to inlet at the other end.
- 1-1/2" X 54" two piece, friction fit, double bend aluminum wand with high impact plastic tool coupling.
- 1-1/2" X 14" high impact plastic floor tool with nylon bristles for cleaning dust and dirt from hard surface floors.
- 1-1/2" X 11" high impact plastic crevice tool.

50-520 VEHICLE CLEANING PACKAGE

Contents:

- 1-1/2" X 25' vacuum hose with 1'-1/2" swivel cuff on one end and 1-1/2" X 5" steel reducer for connecting hose to inlet at the other end.
- 1-1/2" X 4-1/2" "ORANGE CLAW" rug cleaning tool.
- 1-1/2" X 5" non-metallic upholstery tool.
- 1-1/2" X 11" non-metallic crevice tool.

50-530 OFFICE CLEANING PACKAGE

Contents:

- 1-1/2" X 30' vacuum hose with 1'-1/2" swivel cuff on one end and 1-1/2" X 5" steel reducer for connecting hose to inlet at the other end.
- 1-1/2" X 54" two piece, friction fit, double bend aluminum wand with high impact plastic tool coupling.
- 1-1/2" X 11" rug and floor tool with adjustable brush for cleaning various types of carpeting as well as bare floors.
- 1-1/2" X 11" non-metallic crevice tool.
- 1-1/2" grey vinyl round dust brush with PVC bristles.

If the above seems complicated, don't worry about it. All you have to do is call us at 1-800-265-3878, and we will look after your needs.
